PAYMENT STATISTICS

REWARDS TO SECURITY RESEARCHERS

During the DualDefense audit period, bug hunters did not identify any critical vulnerabilities. As a result, no payments from the flash pools staked by $HAI holders were distributed to the security researchers.

SECURITY RESEARCHERS

TOP HACKERS

DexLyn has taken responsibility for compensating security researchers who identified vulnerabilities outside the scope of the DualDefense reward model's terms and conditions.

CONCLUSION

ABOUT DUALDEFENSE

The audit makes no statements or warranties on security of the code. It also cannot be considered as a sufficient assessment regarding the utility and safety of the code, bugfree status or any other statements of the contract.

It is important to note that you should not rely on this report only - we recommend proceeding with several independent audits and a public bug bounty program to ensure security of smart contracts.

TECHNICAL DISCLAIMER

Smart contracts are deployed and executed on blockchain platform. The platform, its programming language, and other software related to the smart contract can have its vulnerabilities that can lead to hacks. Thus, the audit can't guarantee the explicit security of the audited smart contracts.
